

2009 SPRING **DIRECTORY**

Preliminary List of Certified Seed Producers

Pasture Grass
Canola
Crimson Clover
Lupine
Oats
Rye
&
Wheat

Consumer Notice:

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

VARIETY DESCRIPTIONS

For the most recent variety performance data:

Yield

Maturity Dates

Disease Resistance

Insect Resistance

VISIT WWW.SWVT.UGA.EDU OR CONTACT THE DEPARTMENT OF CROP AND SOIL SCIENCES, GRIFFIN CAMPUS, 1109 EXPERIMENT STREET, GRIFFIN, GEORGIA 30223-1797 FOR A COPY OF THE STATE WIDE VARIETY TESTS.

NOTICE

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill #104 in 1956. This bill was superseded by Senate Bill #583 in July of 1997. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

The acreage listed in this directory is grown by members of the Georgia Crop Improvement Association and is based on acres for which the grower applied. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting GEORGIA CERTIFIED SEED are:

1. Adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for Trueness to Variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to:

PVP LEVEL (Legend)

It is very important that you check the description of the variety for the level of protection.

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA 94 and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

Quality Assurance

Quality Assurance Definition

The Georgia Crop Improvement Association, Inc. Quality Assurance program is designed to provide uniform and unbiased quality control for varieties that are not eligible for traditional seed certification. The client defines criteria by which field inspections are made.

VARIETY DESCRIPTIONS

Pasture Grass - Bahiagrass - Tifton 9

Tifton 9 Bahiagrass has the same appearance and requires the same cultural practices as the common Pensacola grown today. Tifton 9 is the 9th cycle of RRPS applied to Pensacola with increased forage yield as the breeding objective. Some tests report a 47% increase in forage production over common Pensacola. Tifton 9 is adapted to Florida, Georgia and the lower half of the Gulf States, wherever Pensacola is successfully grown. It is suited for the same purpose, primarily grazing. **1/ U.S. Protected Variety - to be sold by variety name only as a class of certified seed.**

Pasture Grass - Bahiagrass - TifQuik

TifQuik is a forage Paspalum bahiagrass similar to the variety Tifton 9 except that the new variety has faster germinating seed and thus a quicker field establishment. TifQuik has a four fold or greater percentage germination than Tifton 9 within seven days of planting subsequently pastures are established faster, reducing problems with competitive weeds and growers can obtain up to one ton advantage in dry forage yields in the establishment year. Sold exclusively by licensed growers and the Plant Variety Protection application has been submitted. **4/ U.S. Protected Variety (PVPA 94 and no title V) – A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.** *Description supplied by the University of Georgia.*

Pasture Grass - Bahiagrass – UF-Riata

UF-Riata is a novel diploid bahiagrass (*Paspalum notatum* Flügge) population developed for fall and early spring forage production for the southeastern U.S. It has improved forage growth under short-day lengths and during the cool season. UF-Riata was developed by relay plant sections from Pensacola made between the North Florida Research and Education Center-Marianna and the Range Cattle Research and Education Center-Ona. Its day length response was selected for at Ona and its tolerance to leaf tissue burn from light frosts and freezes were selected for at Marianna. The population exhibits lower photoperiod sensitivity, improved leaf tissue cold tolerance, and increased forage production during the cool season compared to the standard bahiagrass cultivars Argentine and Pensacola. Exclusive marketing rights for UF-Riata have been licensed to Ragan & Massey Seed of Ponchatoula, LA. **6/ U.S. Plant Variety Protection Applied for PVPA94 – may be through title V or not. Same rules apply.** *Variety description provided by North Florida Research and Education Center – Dr. Ann Blount.*

Pasture Grass - Bermudagrass - Coastal

Coastal Bermudagrass developed cooperatively by USDA/ARS and the Georgia Coastal Plain Experiment Station is a F1 hybrid between Tift Bermudagrass and an African Bermudagrass. It is vegetatively propagated and has longer leaves and stems, grows taller and spreads faster than common Bermudagrasses. It is more resistant to disease, nematodes and frost, and is more palatable than the common types. Coastal Bermudagrass can be used for pasture, hay or silage and can be expected to produce more dry matter than common Bermudagrass throughout Georgia.

Pasture Grass - Bermudagrass - Russell

Russell Bermudagrass is believed to be a natural hybrid between Callie and a common Bermudagrass ecotype, and exhibits an overall appearance similar to a robust common Bermudagrass ecotype. Leaf color is slightly darker, leaves are narrower, and stem size at recommended harvest intervals of 4 to 5 weeks is smaller, than “Coastal”. Internodes are shorter than Coastal, but forage growth is more dense, thus allowing excellent forage yields despite a lower height at harvest time. It produces viable seed, but for field scale establishment, only vegetative propagation is deemed feasible.

Pasture Grass - Bermudagrass - Tifton 44

Tifton 44 is a hybrid Bermudagrass released by USDA/ARS and the GA Coastal Plain Experiment Station, Tifton, GA in 1978. It is a fine-stemmed F-1 hybrid that must be propagated vegetatively. Tifton 44 is darker green, has finer stems that cure faster when cut for hay, has more rhizomes, plant height is shorter, makes a denser sod and is more winter hardy when compared to Coastal.

Pasture Grass - Bermudagrass - Tifton 85

Tifton 85 is taller, has larger stems, broader leaves and a darker green color than other Bermudagrass hybrids. It has very large rapidly spreading stolons but few rhizomes. In two 3-year replicated small plot tests conducted beginning in 1985 and 1989, Tifton 85 compared with Coastal Bermudagrass, produced an average of 26% more dry matter that was 11% more digestible.

Canola - Flint

Flint Canola is a spring type canola variety with good cold tolerance and a broad adaptation to the southeastern United States. The maturity of Flint is medium-late relative to other spring types cultivars grown in 1997. Flint blooms and matures approximately 3 days later than Cyclone and 7 days later than Oscar. Flint is similar in height to Cyclone and 7-10 inches taller than Oscar.

The resistance to Flint to *Phoma* blackleg is equal to and often superior to Oscar. Flint produces seed with higher total oil and protein content than Oscar, but less than Cyclone. AgSouth Genetics has an exclusive license. *Variety description provided by the University of Georgia College of Agricultural and Environmental Sciences Department of Crop and Soil Sciences.*

Crimson Clover – AU Sunrise

AU Sunrise is a crimson clover that flowers 5 to 8 days earlier than AU Robin and 12 to 18 days earlier than Tibe. This early flowering crimson clover is excellent as a cover crop because of its early maturity. Its main use is in conservation tillage and as a green manure for early row crop planting. It can also be used as forage. *Variety description provided by Auburn University.*

Lupine – Tifblue 78

Tifblue 78 is a winter hardy, sweet, soft-seeded blue lupine with seed-shatter resistance. It is used for grazing and as a cover crop.

Oats – Horizon 201

Horizon 201 is a winter oat released in 2009. The variety may be used for grain, forage, conservation tillage and wildlife in the Southern U.S. It has good vigorous growth and high tillering capacity. **7/ U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.** *Variety description provided by SUNGRAINS COOPERATIVE.*

Oats – Horizon 270

Horizon 270 is an early heading oat with good grain yield, test weight and good straw strength. **6/ U.S. Plant Variety Protection Applied for PVPA94 – may be through title V or not. Same rules apply.** *Variety description provided by SUNGRAINS COOPERATIVE.*

Oats – LA9339

LA9339 is a mid-tall oat variety with excellent crown rust and very good stem rust resistance (2002 data). Exclusive marketing rights for LA9339 have been licensed to Ragan & Massey Seed of Ponchatoula, LA. **4/ U.S. Protected Variety (PVPA 94 and no title V) – A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.** *Variety description provided by LSU AgCenter.*

Rye - Wrens Abruzzi

Wrens Abruzzi was released to growers in 1953 and has been the predominant rye variety in Georgia since that time. Through many years of natural selection, the Wrens strain of abruzzo rye has become well adapted to Southeastern U. S. conditions. Wrens is an early maturing strain of Abruzzi, which produces an abundance of early winter forage. It is a hardy variety, adapted to all regions of the state. Earliness and a tolerance to several diseases make Wrens Abruzzi more desirable than northern type varieties. Forage and grain production has been high over a period of many years in the Piedmont and Coastal Plain.

Rye - Wrens 96

Wrens 96 has mid-maturity similar to Wrens Abruzzi, medium strength-strawed and is a tall height variety. It matures on an average of 4 days later than Wrens Abruzzi. It is resistant to currently predominant races of leaf rust in Georgia. In sixteen Georgia tests, forage yields were equal to Wrens and higher than FLA 401. It yielded 7 bushels more grain per acre than check varieties in years of high rust incidence (1993 and 1995).

Wheat – AGS 2000

AGS 2000 is a soft red winter wheat developed by the Universities of Georgia and Florida. AGS 2000 is a medium maturing, high yielding, high-test weight variety resistant to current races of leaf rust, and predominant biotype of Hessian fly. The variety has moderate resistance to powdery mildew. **4/ U.S. Protected Variety (PVPA 94 and no title V) – A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.**

Wheat – AGS 2020

AGS 2020 is an early-medium maturity soft red winter wheat with resistance to leaf rust, stripe rust and soil borne mosaic virus and moderately resistant to powdery mildew. It also has moderate resistance to Hessian Fly. This variety is exclusively marketed by AGSouth Genetics and it is expected to be protected by the Plant Variety Protection Act. **4/ U.S. Protected Variety (PVPA 94 and no title V) – A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.** *Description supplied by the University of Georgia.*

Wheat – AGS 2026

AGS 2026 is a medium maturity soft red winter wheat that has resistance to leaf rust, stripe rust and soil borne mosaic virus and moderately susceptible to powdery mildew. It is resistant to Hessian fly Biotype L. This variety is exclusively marketed by AGSouth Genetics and it is expected to be protected by the Plant Variety Protection Act. **6/ U.S. Plant Variety Protection Applied for PVPA94 – may be through title V or not. Same rules apply.** *Description supplied by the University of Georgia.*

Wheat – AGS 2031

Developed by the University of Georgia, AGS 2031 is a medium maturity, high test weight wheat with good resistance to stripe rust, leaf rust, powdery mildew and soil-borne virus. It has moderate resistance to Hessian fly. It is shorter in plant height than AGS 2000. It is marketed exclusively by AGSouth Genetics. **4/ U.S. Protected Variety (PVPA 94 and no title V) – A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.**

Wheat – AGS 2060

This variety was developed by the Louisiana State University Agricultural Center, adapted to the Gulf Coast and southeastern wheat regions of the U.S. It has excellent grain yield and very high test weight with medium-early heading date. The variety has excellent resistance to leaf rust, but is moderately susceptible to powdery mildew with resistance to Hessian fly types B, C, D, and E. Marketed exclusively by AGSouth Genetics. **6/ U.S. Plant Variety Protection Applied for PVPA94 – may be through title V or not. Same rules apply.**

Wheat – Baldwin (GA 981622-5E35)

Baldwin is a soft red winter wheat developed by Dr. Jerry W. Johnson at the University of Georgia, Georgia Agricultural Experiment Station, Griffin. The variety is a medium maturing, high yielding excellent test weight, awned wheat with resistance to current races of leaf rust, stripe rust, and to Hessian fly biotypes. It is resistant to certain stem and leaf rust lines. Crop Protection Services has an exclusive propagation and distribution license for this variety. **6/ U.S. Plant Variety Protection Applied for PVPA94 – may be through title V or not. Same rules apply.** *Description supplied by the University of Georgia.*

Wheat – Fleming

Fleming wheat is an early maturing, medium strength-strawed, short height line. **5/ U.S. Protected Variety (PVPA 94 and title V) – to be sold by Variety name only as a class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.**

Wheat - GA Gore

GA Gore is a high yielding soft red winter cultivar released by the University of Georgia Agricultural Experiment Station. GA Gore wheat is a late maturing, medium height, medium strength-strawed, with high yield potential and good milling and baking quality. It possesses excellent resistance to the locally predominate races of Hessian fly, good resistance to current races of leaf rust, stem rust, and septoria glume blotch and moderate resistance to powdery mildew.

Wheat – LA95135

LA95135 is a soft red winter wheat variety that is adapted to the Gulf Coast and southeastern wheat regions of the U.S. It was developed by the LSU AgCenter wheat breeding program and released in 2006. LA95135 was released primarily to fulfill the need for a pasture, cover crop and wildlife food plot wheat variety. Exclusive marketing rights for LA95135 have been licensed to Ragan & Massey Seed of Ponchatoula, LA. **6/ U.S. Plant Variety Protection Applied for PVPA94 – may be through title V or not. Same rules apply.** *Variety description provided by LSU AgCenter.*

Wheat – Oglethorpe

Oglethorpe is a medium maturing soft red winter wheat developed by the University of Georgia. It is a high yielding, excellent test weight wheat resistant to current races of leaf and stripe rust. It is also resistant to powdery mildew, but susceptible to Biotypes B, D, E, & L of Hessian flies. The variety will be marketed by Crop Production Services, Galesburg, Illinois. It is expected that plant variety protection will be applied for. **6/ U.S. Plant Variety Protection Applied for PVPA94 – may be through title V or not. Same rules apply.** *Description supplied by the University of Georgia.*

Wheat – Roberts

Roberts, a soft red winter wheat cultivar was cooperatively developed and released by the Georgia and Florida Agricultural Experiment Stations in 1997. The major advantages of this cultivar are its high grain yield, late maturity and improved disease resistance. This cultivar is adapted throughout the South, especially in the Upper Coastal Plain and Piedmont regions. It is similar in lodging to GA Gore. Roberts is similar in susceptibility as Coker 9134 to leaf rust. Roberts has shown to have better resistance to Hessian fly than GA Dozier and Coker 9134. **5/ U.S. Protected Variety (PVPA 94 and title V) – to be sold by Variety name only as a class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.**

Wheat – USG 3209

USG 3209, developed by Virginia Tech, is an early maturing, very short plant height soft red winter wheat resistant to Biotype B Hessian Fly. The variety has very good stripe rust and powdery mildew resistance with good leaf rust resistance. It is sensitive to Metribuzin. The variety is exclusively marketed by UniSouth Genetics, Inc. **5/ U.S. Protected Variety (PVPA 94 and title V) – to be sold by Variety name only as a class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.** *Description supplied by UniSouth Genetics, Inc., Nashville, Tennessee.*

Wheat – USG 3725

USG 3725 is a medium maturing soft red winter wheat with good leaf rust, stem rust, stripe rust and powdery mildew resistance. The variety will be marketed in the mid-south from Arkansas to North Carolina. It will be marketed exclusively by UniSouth Genetics, Inc., Nashville, Tennessee. It is expected that plant variety protection will be applied for. **7/ U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower’s responsibility to determine current status of variety.** *Description supplied by UniSouth Genetics, Inc.*

Wheat – 8641

8641 is an early-medium maturity soft red winter wheat with resistance to Hessian fly Biotype B and E. The variety has resistance to previous years’ races of powdery mildew, leaf rust, soil borne mosaic virus and stripe rust. It is recommended for the mid-south, east coast and southeastern US. It is marketed exclusively by Southern States. **4/ U.S. Protected Variety (PVPA 94 and no title V) – A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.** *Description supplied by the University of Georgia.*

Wheat – 9700

9700 is a soft red winter wheat developed by Syngenta Seeds, Inc. and its legacy companies under the AgriPro Brand. The variety will be marketed in the lower Mississippi Valley and the southern east coast. 9700 is resistant to moderately resistant to prevalent field races of stripe rust in the area. It is moderately susceptible to susceptible to prevalent field races of powdery mildew in the east coast areas and moderately resistant in the Delta region. 9700 is resistant to moderately resistant to prevalent field races of leaf rust in the adapted areas. 9700 is susceptible to Hessian fly. 9700 is medium short in height and early season heading. Plant variety protection is anticipated. **5/ U.S. Protected Variety (PVPA 94 and title V) – to be sold by Variety name only as a class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.** *Description supplied by AOSCA.*
