## ***For Spring 2010 Planting***

### **Preliminary List of Certified Seed Producers**

#### **Peanuts**

#### **&**

#### **Soybeans**

**GEORGIA CROP IMPROVEMENT ASSOCIATION**

**2425 South Milledge Avenue**

**Athens, Georgia 30605**

**Phone: 706-542-2351 Fax: 706-542-9397**

**Email: [gacrop@bellsouth.net](mailto:gacrop@bellsouth.net)**

**[www.certifiedseed.org](http://www.certifiedseed.org)**

#### **IMPORTANT NOTICE!**

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. The directory has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag. A new GCIA emblem or branded bag is required for all certified seed.

## **Consumer Notice:**

**The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.**

## **VARIETY DESCRIPTIONS**

**For the most recent variety performance data:**

**Yield**

**Maturity Dates**

**Disease Resistance**

**Insect Resistance**

**VISIT [WWW.SWVT.UGA.EDU](http://WWW.SWVT.UGA.EDU) OR CONTACT THE DEPARTMENT OF CROP AND SOIL SCIENCES, GRIFFIN CAMPUS, 1109 EXPERIMENT STREET, GRIFFIN, GEORGIA 30223-1797 FOR A COPY OF THE STATE WIDE VARIETY TESTS.**

## NOTICE

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill #104 in 1956. This bill was superseded by Senate Bill #583 in July of 1997. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

Acreage listed in this directory has been compiled from the "Field Inspection and Membership" form submitted by the grower to the GCIA. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting GEORGIA CERTIFIED SEED are:

1. They are from adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for trueness to variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to:

Georgia Crop Improvement Association, Inc.  
2425 South Milledge Avenue

E-mail: [gacrop@bellsouth.net](mailto:gacrop@bellsouth.net)  
Terry Hollifield, Executive Director

# PVP LEVEL (Legend)

It is very important that you check the description of the variety for the level of protection.

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is in pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

**Quality Assurance Definition**

The Georgia Crop Improvement Association, Inc. Quality Assurance program is designed to provide uniform and unbiased quality control for varieties that are not eligible for traditional seed certification. The client defines criteria by which field inspections are made.

## VARIETY DESCRIPTIONS

**For the most recent variety performance data:**

**Yield  
Maturity Dates  
Disease Resistance  
Insect Resistance**

VISIT [WWW.SWVT.UGA.EDU](http://WWW.SWVT.UGA.EDU) OR CONTACT THE DEPARTMENT OF CROP AND SOIL SCIENCES, GRIFFIN CAMPUS, 1109 EXPERIMENT STREET, GRIFFIN, GEORGIA 30223-1797 FOR A COPY OF THE STATE WIDE VARIETY TESTS.

### Peanuts – AT-215

This is a large seeded commercial runner variety. The variety has a spreading plant growth habit with a distinct main stem. Leaf color is dark green, very similar to ViruGard. Pod and seed size is similar to ViruGard. AT-215 is an early maturing variety (120 days in the SE) and has a high oleic fatty acid profile. **AT-215 is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

### Peanuts – AT-3085R0

A commercial runner variety with high oleic oil chemistry, high yield and TSWV resistance. The variety has a spreading plant growth habit with a distinct main stem. **AT-3085R0 is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

### Peanuts – Florida-07

The variety was developed at the North Florida Research and Education Center, part of the University of Florida Institute of Food and Agricultural Sciences. This variety has a runner growth habit with a semi-prominent main stem. Pods are larger than a typical runner and the seed size is most similar to the cultivar C-99R. Florida-07 has excellent resistance to spotted wilt caused by tomato spotted wilt virus and good resistance to white mold and tolerance to late leaf spot. Florida-07 has high oleic, low linoleic oil chemistry. **Florida-07 is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

### **Peanuts – Georgia-02C**

Georgia-02C was developed by the University of Georgia and released in 2002. 1999-2001 data indicates that Georgia-02C has better TSWV and higher yields than Georgia Hi-O/L. Seed per pound averages 725 for Georgia-02C compared to 561 for Georgia Hi-O/L. Maturity of Georgia-02C can be later than Georgia Green. It also has the high-oleic oil chemistry. Georgia-02C has excellent TSWV resistance as well as resistance to CBR. **Georgia-02C is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U.S. Protected Variety – to be sold by variety name only as a class of certified seed – PVPA 94.**

### **Peanuts – Georgia-03L**

Georgia-03L is a large-podded runner-type peanut variety that was released in 2003. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia-03L has similar maturity as Georgia Green with pods and seed significantly larger. Georgia-03L also has a high level of resistance to tomato spotted wilt virus (TSWV). It has a high percentage of large smooth fancy pods with an intermediate runner growth habit and pink seedcoat color. It has very good stability and a wide range of adaptability. **5/ U. S. Protected Variety – to be sold by variety name only as a class of certified seed – PVPA 94.**

### **Peanuts – Georgia-06G**

This is a runner type peanut released in 2006 by the Georgia Agricultural Experiment Stations. Georgia-06G has a high level of resistance to the spotted wilt disease caused by the tomato spotted wilt virus. Georgia-06G combines high TSWV resistance with medium maturity, high yield, grade and dollar value return per acre. **5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

### **Peanuts – Georgia-07W**

Georgia-07W is a runner-type peanut with TSWV and white mold resistance. It is a medium maturity variety. During the testing years of 2003-2006 when averaged across multi-locations in Georgia, Georgia-07W was found to be the lowest in TSWV incidence and total disease incidence, highest yielding in pod yield, TSMK grade and dollar return per acre compared to the current leading runner type cultivars, Georgia Green and C-99R. Nuts of Georgia-07W are larger than Georgia Green. Developed by the University of Georgia at the Coastal Plains Experiment Station and released in 2007. **6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

### **Peanuts – Georgia-08V**

Georgia-08V is a high-oleic TSWV resistant, large seeded, Virginia-type peanut variety released in 2008 by the University of Georgia. Georgia-08V has high oleic and low linoleic fatty acid ratio for improved oil and longer shelf life of in shell Virginia-type peanuts. It has medium maturity. **Georgia-08V is covered by three utility patents on high oleic chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. . 6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

### **Peanuts - Georgia Green**

Georgia Green is a runner-type peanut cultivar, released in 1995 by the Georgia Agricultural Experiment Stations. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, Georgia. Georgia Green has very good stability across many different environments. Georgia Green has shown good resistance to tomato-spotted wilt virus. Maturity is the same as Florunner. **5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

### **Peanuts – Georgia Greener**

This is a runner type peanut release in 2006 by the Georgia Agricultural Experiment Stations. Georgia Greener has a high level of resistance to the spotted wilt disease caused by the tomato spotted wilt virus. Georgia Greener has typical runner size pods, low disease incidence, and high TSMK grade. Maturity is ranked as medium similar to Georgia Green. **5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

### **Peanuts – McCloud**

The variety was developed at the North Florida Research and Education Center, part of the University of Florida Institute of Food and Agricultural Sciences. This variety has runner growth habit with a prominent main stem. Pods are larger than a typical runner and seed size is between that of Georgia Green and C-99R. McCloud has a good resistance to spotted wilt caused by tomato spotted wilt virus but is susceptible to white mold and leaf spot. The variety has high oleic, low linoleic oil chemistry. **McCloud is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

### **Peanuts – Tifguard**

Tifguard is a 135 day maturity runner market type peanut variety developed at the Coastal Plains Experiment Station, Tifton, Georgia. It has high levels of resistance to both the peanut root-knot nematode and TSWV when tested in 2004, 2005 and 2006. **6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

**Soybeans – AGS 747RR**  
**(Proprietary)**

AGS 747 RR is a late maturing group VII soybean with resistance to race 3, soybean cyst nematode, moderately resistant to southern root-knot nematode, resistant to reniform nematode and resistant to prevailing strains of frogeye leaf spot disease and soybean mosaic virus. The variety will be marketed exclusively by AGSouth Genetics, LLC. **A patent has been applied for and no farmer saved seed is allowed.**

**Soybeans – AGS 758RR**  
**(Proprietary)**

AGS 758 RR is a Roundup Ready Group VII soybean. It is resistant to stem canker, southern, peanut, southern cyst race 3 and Javanese root nematodes. The variety has resistance to frogeye leaf spot. The variety will be marketed exclusively by AGSouth Genetics, LLC. **This is a patented variety and no farmer saved seed is allowed.**

**Soybeans – AGS Woodruff**  
**(Proprietary)**

AGS Woodruff, tested as G00-3209 is a non-Roundup Ready, Maturity Group VII soybean. It is resistant to SRKN, SCN(R#), stem canker and red crown rot. It is susceptible to peanut root-knot nematode and most other races of soybean cyst nematode. **The variety will be marketed exclusively by AGSouth Genetics, LLC and is a patented variety. Farmers may not save seed for any reason.**

**Soybeans - Benning**  
**(Proprietary)**

Benning, a Maturity Group VII soybean, has a determinate growth habit, purple flowers, tawny pubescence, and tan pod walls. Seeds are yellow with shiny seed coats and a brown hila that vary in intensity. It is resistant to southern, peanut, and Javanese root-knot nematodes, race 3 of soybean cyst nematode, stem canker, and frogeye leaf spot. Benning will be marketed exclusively by AGSouth Genetics, LLC. **5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

**Soybeans - Cobb**

Cobb is a Maturity Group VIII soybean with white flowers, gray pubescence and tan pod walls.

Seeds have buff hilum. Approximately 1% to 3% of seed is purple stained. Shattering has been observed with 1% to 3% loss.

### **Soybeans – Cook**

Cook is a maturity group VIII. It is resistant to major races of frog eye leafspot and has moderate resistance to southern root-knot nematode. It is resistant to stem canker and powdery mildew. It is susceptible to the peanut and Javanese root-knot nematode and the soybean cyst nematode.

### **Soybeans – Prichard** **(Proprietary)**

Prichard is a maturity group VIII. It has resistance to SCN(R3), SCN(R9), SCN(R14), southern root-knot nematode and stem canker. It is tolerant to lance nematodes. The variety is susceptible to reniform, peanut root-knot and Javanese root-knot nematodes. The variety is marketed exclusively by AGSouth Genetics, LLC. 5/ **U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

### **Soybeans –Prichard RR** **(Proprietary)**

Prichard RR is a glyphosate tolerant (Roundup Ready) group VIII soybean. The variety has white flowers, gray pubescence and tan pod walls. It has yellow seeds with shiny seed coats and buff hila. Prichard RR is resistant to SCN(R3), SCN(R9), SCN(R14), southern root-knot nematodes and stem canker. It is also tolerant to Lance Nematodes. The variety is susceptible to reniform, peanut root-knot and Javanese root-knot nematodes. The variety will be marketed exclusively by AGSouth Genetics, LLC. **This is a patented variety and no farmer saved seed is allowed.**
