PEANUTS, PECANS & SOYBEANS

IMPORTANT NOTICE!

The growers listed herein planted seed eligible for certification. Final certification is contingent only on a satisfactory field inspection, germination and purity report. The directory has been prepared to supply the seed trade with a list of certified seed growers. Certification is void unless the bag carries the official certification tag. A new GCIA emblem or branded bag is required for all certified seed.

This publication copyrighted by the Georgia Crop Improvement Association, Inc. 2011.

Consumer Notice:

The certification process is limited to inspections that verify easily observable phenotypic characteristics of a variety as described by the originator of a variety and when applicable adhere to published seed quality standards.

Acreage listed in this directory has been compiled from the “Field Inspection and Membership” form submitted by the grower to the GCIA. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

NOTICE

The Georgia Crop Improvement Association is an organization of farmers and others who are interested in growing and making available to the public, through certification, high quality seeds and propagating materials of superior varieties so grown and distributed as to insure genetic purity and identity. The Georgia Crop Improvement Association was organized in 1946, and made the legal certifying agency by passage of House Bill #104 in 1956. This bill was superseded by Senate Bill #583 in July of 1997. Both bills authorized the Dean of the University of Georgia College of Agriculture and Environmental Sciences to designate the Georgia Crop Improvement Association as the legal certifying agency in Georgia.

Acreage listed in this directory has been compiled from the "Field Inspection and Membership" form submitted by the grower to the GCIA. Final certification is not complete until a satisfactory field inspection has been made and a representative cleaned seed sample has passed a complete laboratory analysis.

Five reasons for planting GEORGIA CERTIFIED SEED are:

1. They are from adapted varieties of known performance.
2. Never more than two generations from Foundation seed.
3. Field inspected for trueness to variety, inseparable other crop and noxious weed seeds.
4. Conditioned in an Approved Plant.
5. Laboratory tested and meets or exceeds GCIA's minimum germination and purity standards.

Address all correspondence pertaining to certification to:

PVP LEVEL (Legend)

It is very important that you check the description of the variety for the level of protection.

**The most current status of Plant Variety Protected crops
may be found by visiting the PVP Office online at:**

www.ars-grin.gov/cgi-bin/npgs/html/pvplist.pl

The legends are as follows:

0. Variety not Protected by PVPA - No limit on how much seed a farmer can save and sell. Seed sold commercially must be sold by variety name.
1. U. S. Protected Variety thru Certification (PVPA 1970 title V) - to be sold by variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. No farmer saved seed can be sold unless certified by a Crop Improvement Association.
2. U. S. Protected Variety (PVPA 1970 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. If farm plans change, the farmer may sell the saved seed, but only the amount saved to plant his or her own holdings. All seed must be sold by variety name.
3. U.S. Plant Variety Protection Applied for under the 1970 PVPA law and may be thru title V or not. Application for protection is in pending, but same rules apply.
4. U.S. Protected Variety (PVPA 94 and no title V) - A farmer may save enough seed to plant on his or her own farm holdings. Saved seed may not be sold without permission from the variety owner.
5. U. S. Protected Variety (PVPA and title V) - to be sold by Variety name only as a Class of certified seed. A farmer may save enough seed to plant on his or her own farm holdings. No seed may be sold without permission from the variety owner. If permission is granted, seed must be sold as a class of certified seed.
6. U.S. Plant Variety Protection Applied for PVPA 94 - may be through title V or not. Same rules apply.
7. U.S. Plant Variety Protection (PVPA 94) is expected to be applied for. Until official notice is received, the variety has no protection. It is the grower's responsibility to determine current status of variety.

Under both the original PVP Law and the 1994 PVP law it is an infringement to clean, bag or STORE farmer saved seed if the quantity exceeds what the farmer can legally save for planting purposes. The conditioner can be held liable for PVPA infringements.

If a variety is patented or contains a patented gene (Roundup Ready®, best example) a farmer may not save any seed for planting purposes. A CUSTOM CLEANER CONDITIONER MAY NOT CLEAN ANY SEED OF PATENT PROTECTED VARIETIES. To do so is an infringement of the patent.

VARIETY DESCRIPTIONS

Peanuts – AT-215

This is a large seeded commercial runner variety. The variety has a spreading plant growth habit with a distinct main stem. Leaf color is dark green, very similar to ViruGard. Pod and seed size is similar to ViruGard. AT-215 is an early maturing variety (120 days in the SE) and has a high oleic fatty acid profile. **AT-215 is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

Peanuts – Florida-07

The variety was developed at the North Florida Research and Education Center, part of the University of Florida Institute of Food and Agricultural Sciences. This variety has a runner growth habit with a semi-prominent main stem. Pods are larger than a typical runner and the seed size is most similar to the cultivar C-99R. Florida-07 has excellent resistance to spotted wilt caused by tomato spotted wilt virus and good resistance to white mold and tolerance to late leaf spot. Florida-07 has high oleic, low linoleic oil chemistry. **Florida-07 is covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

Peanuts – Georgia-06G

This is a runner type peanut released in 2006 by the Georgia Agricultural Experiment Stations. Georgia-06G has a high level of resistance to the spotted wilt disease caused by the tomato spotted wilt virus. Georgia-06G combines high TSWV resistance with medium maturity, high yield, grade and dollar value return per acre. **5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

Peanuts – Georgia-07W

Georgia-07W is a runner-type peanut with TSWV and white mold resistance. It is a medium maturity variety. During the testing years of 2003-2006 when averaged across multi-locations in Georgia, Georgia-07W was found to be the lowest in TSWV incidence and total disease incidence, highest yielding in pod yield, TSMK grade and dollar return per acre compared to the current leading runner type cultivars, Georgia Green and C-99R. Nuts of Georgia-07W are larger than Georgia Green. Developed by the University of Georgia at the Coastal Plains Experiment Station and released in 2007. **6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

Peanuts – Georgia-09B

Georgia-09B is a new high-oleic, TSWV-resistant, medium-seeded, runner-type peanut variety that was released in 2009 by the Georgia Agricultural Experiment Stations. It was developed at the University of Georgia, Coastal Plain Experiment Station in Tifton, GA. Georgia-09B originated from the first backcross made with Georgia Green, as the recurrent parent. Georgia-09B has the high-oleic and low linoleic fatty acid ratio for improved oil quality and longer shelf-life of peanut and peanut products. During the past several years averaged across multilocation tests in Georgia, Georgia-09B was found to be among the lowest in percent TSWV disease incidence, highest in pod yield, highest in TSMK grade, and highest in dollar value return per acre compared to other high-oleic, runner-types tested each year. Georgia-09B combines the excellent roasted flavor of Georgia Green with the high-oleic trait in a medium maturity, medium-seeded, runner-type peanut variety with high-TSWV resistance, high-grade, and high-dollar value return per acre. **Georgia-09B is also covered by three utility patents on high oleic oil chemistry. Only licensed producers may sell this variety for seed and no farmer saved seed is allowed. 6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

Peanuts – Georgia-10T

This variety is a medium-late maturity runner type allowing for early April planting. It has a high level of resistance to tomato spotted wilt virus (TSWV) and is adapted throughout the Southeastern U.S production area. Nut size is reported to be larger than Georgia 01R. **6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

Peanuts – Georgia Greener

This is a runner type peanut release in 2006 by the Georgia Agricultural Experiment Stations. Georgia Greener has a high level of resistance to the spotted wilt disease caused by the tomato spotted wilt virus. Georgia Greener has typical runner size pods, low disease incidence, and high TSMK grade. Maturity is ranked as medium similar to Georgia Green. **5/ U. S. Protected Variety - to be sold by variety name only as a class of certified seed - PVPA 94.**

Peanuts – Tifguard

Tifguard is a 135 day maturity runner market type peanut variety developed at the Coastal Plains Experiment Station, Tifton, Georgia. It has high levels of resistance to both the peanut root-knot nematode and TSWV when tested in 2004, 2005 and 2006. **6/ U.S. Plant Variety Protection Applied for PVPA 94 – may be through title V or not. Same rules apply.**

Pecans – Cunnard

The variety when compared to the Stuart standard is earlier maturing, but not as early as Pawnee and Byrd. The nut size is similar to Morrill and Desirable and larger than Byrd, Pawnee and Stuart. The nut size of less than 45/lb. ensures the nut is highly suited to the profitable “Mammoth half” trade. Cunnard should not be planted unless the grower plans to control fruit load by thinning. Cunnard is highly resistant to scab disease. The variety does not have the speckling problem of Pawnee.

Pecans – Morrill

The cultivar is precocious, moderately early nut maturity especially suited to the pecan grower and has a large nut size with good kernel quality, moderate resistance to scab and good resistance to powdery mildew. Morrill has good resistance to black pecan aphid. Morrill has a substantially higher percentage of kernels than any know pecan cultivar.

Soybeans – AGS 758RR
(Proprietary)

AGS 758 RR is a Roundup Ready Group VII soybean. It is resistant to stem canker, southern, peanut, southern cyst race 3 and Javanese root nematodes. The variety has resistance to frogeye leaf spot. **The variety will be marketed exclusively by AGSouth Genetics, LLC. This is a patented variety and no farmer saved seed is allowed.**

Soybeans - Cobb

Cobb is a Maturity Group VIII soybean with white flowers, gray pubescence and tan pod walls. Seeds have buff hilum. Approximately 1% to 3% of seed is purple stained. Shattering has been observed with 1% to 3% loss.

Soybeans – Cook

Cook is a maturity group VIII. It is resistant to major races of frog eye leafspot and has moderate resistance to southern root-knot nematode. It is resistant to stem canker and powdery mildew. It is susceptible to the peanut and Javanese root-knot nematode and the soybean cyst nematode.

Soybeans – G00-3209
Brand: AGS Woodruff
(Proprietary)

AGS Woodruff, tested as G00-3209 is a non-Roundup Ready, Maturity Group VII soybean. It is resistant to SRKN, SCN(R#), stem canker and red crown rot. It is susceptible to peanut root-knot nematode and most other races of soybean cyst nematode. **The variety will be marketed exclusively by AGSouth Genetics, LLC and is a patented variety. Farmers may not save seed for any reason.**

Soybeans - G03-1187 RR
Brand: AGS 787 RR
(Proprietary)

AGS 787 RR is a high yielding late Maturity Group VII (7.9) glyphosate resistant variety. It has resistance to southern stem canker and southern, peanut and Javanese root-knot nematodes and race 3 of soybean cyst nematode. The variety is adapted to areas of the southern USA that commonly grow MG VII soybean cultivars and areas that are known to have or expected to have damaging levels of the southern, peanut and Javanese root-knot nematodes and race 3 of soybean cyst nematode. The protein and oil content of G03-1187RR is similar to other commonly grown MG VII cultivars. **The variety will be marketed exclusively by AgSouth Genetics, LLC. This is a patented variety and no farmer saved seed is allowed.**
